

Run every charter beautifully.

From the first inquiry to the final departure.

AZURIS

OPERATING PLATFORM
FOR MODERN CHARTER BUSINESSES

One connected workspace for modern charter teams.

Inquiries / Fleet / Quotes / Bookings / Your team

Explore the live Demo at demo.azuris.app

Less retyping. Clearer handoffs.

Give each stage the information it needs. Keep your team in control.

01

Capture & qualify

Collect dates, guest count, budget and preferences. Keep the source of the inquiry connected.

02

Recommend & quote

Find suitable yachts, prepare customer pricing and share a branded quote.

03

Coordinate & deliver

Track booking preparation, payment records and customer documents through departure.

AZURIS / PRODUCT OVERVIEW

Make the first contact easy.

Give customers a simple way to send the details your team needs.

01

Personal & company links

Share an inquiry form by text, email or a downloadable QR code. Personal links retain the source of the request.

02

Custom addresses

Choose a memorable link ending. Previous addresses remain valid; disabling the link disables its addresses.

03

A useful intake record

Capture charter preferences and notes, assign follow-up, prepare a quote, or archive and restore the inquiry.

Turn a request into a next step.

Keep customer preferences, assignment and quote preparation in one place.

Inquiry workspace with fictional Demo information.

Build yacht knowledge your team can use.

Bring scattered listing information into a reviewed fleet record.

01

Import & review

Use pasted listing details or screenshots to prepare a yacht record. Check extracted facts and rates before saving.

02

Describe & present

Maintain photos, amenities, add-ons and duration pricing. Review AI-assisted customer copy before using it.

03

Keep listings ready

Readiness checks surface missing information. Keep broker contacts and internal rates within authorized staff views.

Help agents make a better recommendation.

Useful yacht information and customer prices, with sensitive business details protected.

90' Atlas

Up to 13 guests

PICKUP

Miami Beach Marina

CUSTOMER - 4 HR

\$6,500

A commanding 90-foot yacht for executive hospitality and premium group celebrations.

Quote this yacht

Sales desk with sample yacht pricing. Availability requires confirmation.

Make the choice feel easy.

Carry your brand from yacht options to the customer's next question.

01

Present the options

Prepare yacht photos, descriptions, pickup details and clear charter pricing in a branded quote.

02

Share the details

Use customer quote links, galleries and downloaded quote PDFs. Keep internal costs and broker contacts private.

03

Keep people involved

A yacht selection is a request for the team to handle. Confirm availability and the booking before promising a charter.

A reply should move the quote forward.

Manage customer questions and follow-up status alongside the sales pipeline.

Sample customer conversation. Live notification delivery depends on workspace configuration.

Know what still needs to happen.

Keep charter details, preparation and payment status attached to the booking.

Booking workspace with fictional data. Azuris tracks payment records; your business handles payment collection.

Finish with a consistent customer handoff.

Keep practical charter information clear, accessible and on brand.

01

Quote documents

Provide yacht options, photos, prices and charter details in a consistent customer presentation.

02

Pickup information

Share the pickup plan and charter contact details through the customer document workflow.

03

Booking packages

Keep relevant booking documents together. Review details before sharing, with layouts built for desktop and phone.

Grow the team. Keep clear boundaries.

Give each person the information and responsibilities appropriate to their role.

01

Sales access

Agents work with customer-safe yacht information and prices. Internal costs, margins and broker contacts stay protected.

02

Referral attribution

Keep the source of a request connected. Support referral partners alongside the selling agent.

03

Controlled onboarding

Manage invitations, training and access separately where recruiting is enabled. Approval does not automatically activate an account.

Know how the earnings were calculated.

Track agent and referral commissions. Actual payouts remain with your business.

01

Clear allocation

Commissionable profit reflects eligible revenue less yacht or broker cost and direct expenses. Referral share is allocated first; sales share uses the remaining profit.

02

Rates with history

Rates are saved at confirmation. Review eligible unpaid confirmed bookings separately when changes require a reason; recorded payments are preserved.

03

Review & record

Earnings estimates may change with expenses or refunds. Approval requires a completed charter and full customer payment. Record payouts after paying externally.

Less preparation. More time for clients.

Use assistance for the busywork while your team approves the facts.

01

Extract the details

Start from listing text or screenshots. Review the yacht information and pricing before it becomes a saved record.

02

Prepare customer copy

Use approved yacht facts to prepare descriptions. Keep broker contacts, internal notes and costs out of customer-facing copy.

03

Stay in control

AI assistance supports staff decisions. It does not independently confirm availability, finalize a charter or pay a commission.

A shared workflow with deliberate access.

Keep business information separated from what customers and sales agents need.

01

Company workspaces

Company data and role-based access define what people can see and do. Customer documents use a separate presentation.

02

Operational history

Keep changes, payment records and commission review connected to the relevant work. Archive records when they no longer need attention.

03

A controlled Demo

Explore fictional records in a temporary workspace. Real emails, invitations and account activation are restricted. Features depend on permissions and configuration.

SEE IT FOR YOURSELF

Your next charter. A clearer way to run it.

Start with a sample workflow, then evaluate a controlled pilot with your team.

01 Explore the Demo

Follow an inquiry, review a quote and open a booking.

02 Choose a real workflow

Identify the handoff your team most wants to improve.

03 Shape the rollout

Confirm roles, branding and the features your workspace needs.
